

How to execute java class compiled in eclipse from command prompt:

- All compiled classes are present in **C:\JavaPrep\ws\Java\bin\core\java** path

- Try to execute JoinDemo class from command prompt

- This is because classpath variable is not set in the environment variable. Now set classpath to **C:\JavaPrep\ws\Java\bin\core\java** and try to execute JoinDemo

The screenshot shows a Windows command prompt window titled "Administrator: C:\Windows\system32\cmd.exe". The command history is as follows:

```
C:\JavaPrep\ws\Java>echo %classpath%
C:\JavaPrep\ws\Java
C:\JavaPrep\ws\Java>java -cp ./bin; core.java.JoinDemo
main
C:\JavaPrep\ws\Java>
```

The output of the Java command is "main". The taskbar at the bottom shows the date and time as "January ( 16 ) 1:33 PM 8/10/2015".
